

TEAM ID	PNT2022TMID19312
PROJECT NAME	Personal Assistance for Seniors Who Are Self-Reliant

Sprint 1

The AIM of Sprint 1 is SIMULATION CREATION.

Duration : 6 days

In this Sprint 1 we have found out what the elderly people used to and suffer in Alzheimer disease .So the we had decided that we should find the solution of four different Ideas from our teammates

- 1) Our teammate RANJITH KUMAR k, Medicine Remainder for Alzheimer disease person to keep an instant remainder for their medicine that is taken by them and keep them on track of theirmedicine taken.
- 2) Our teammate VASANTH M,A Medicine Remainder for elderly person that are elderly person in home and Hospital and keep them check in Medicine that are forgotten byCaretaker and Person around them.
- 3) Our teammate ELANJURIYAN S, A Stock Remainder of Medicine for Elderly Person andkeep the medicine in check every time if the medicine prolonged for another week and have the refilled alarm for the medicine that need to taken.
- 4) Our teammate LOKKISHORE S ,A Scan of medicine to zoom and see the medicine thoseare taken by the elderly person and keep in check of medication of elderly person. If needed the medication can be upload the App.

By considering all the ideas that are given teammate .We conclude that are of decision made by teammate is make a combine idea of Medicine Remainder App that feature of scanning of medicine , medicine remainder at correct timing, Stock remainder.

What we should complete in sprint 1? The Issue collected from user,

USN 1:As a user, I want to take Medicines on time and monitor my health

USN 2:As a user, I want to take my tablets on time by voice command

USN 3:As a user, I need to take my medicine and I am not able see the dosage of medicine properly

USN 4: As a user, Sometimes my medicine aren't in stock and I usually forget the Stock of my medication.

REQUIRED MATERIALS:

1. RTC DS3231 module
2. 16x2 LCD Display
3. Buzzer
4. Led(any color)
5. Breadboard
6. Push Buttons
7. 10K Potentiometer
8. 10K,1K Resistors
9. Jumper Wires
10. Arduino Uno

Simulation:

Code:

```
//Medicine Reminder using Arduino Uno  
  
// Reminds to take medicine at 8am, 2pm, 8pm
```

```

/* The circuit:

  LCD RS pin to digital pin 12
  LCD Enable pin to digital pin 11
  LCD D4 pin to digital pin 5
  LCD D5 pin to digital pin 4
  LCD D6 pin to digital pin 3
  LCD D7 pin to digital pin 2
  LCD R/W pin to ground
  LCD VSS pin to ground
  LCD VCC pin to 5V
  10K resistor:
    ends to +5V and ground
    wiper to LCD VO pin (pin 3)*/

```

CONCLUSION :

The conclusion of Sprint 1 we have analysed all the problems that are faced by the elderly people and created the dry code simulation that are given by ideas by our teammates.
